

textiles

FMG continues its development program of innovative textiles for the 2009-2010 season.

A new range of products has been already introduced with the 2009 Catalogue, but many new ones are going to be available in September '09.

With the turn of the season, FMG introduces a new range of products that provide for a better streamlined collection, full of exclusive and innovative contents.

Here follows a short introduction of some of them:

New Movidia Plus

Finally we have completed this very important development at FMG. The new collection has left unchanged the previous colour range.

Minor variations are almost invisible and are due to the following technical aspects:

- better scratch resistance
- improved material memory and handling qualities
- less colour variation with light incidence
- elimination of any doubtful chemical/metallic substance

In developing the new product line we have also achieved many important aspects:

- faster delivery time
- lower minimums for special colors
- better quality control
- better colour consistency

textiles

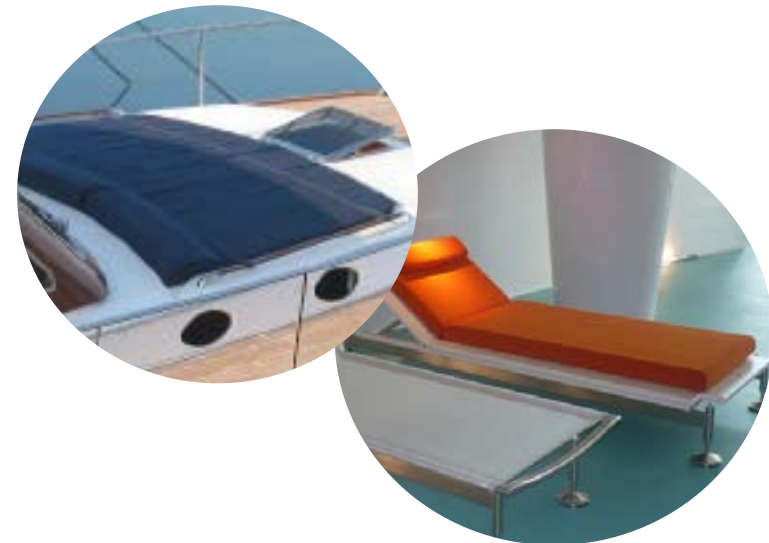

New Mambo range

Following the trend that we set at FMG introducing Movida a few years ago, we are launching a new textile look vinyl. A canvas look product made out of a number of novel natural look colors. The Mambo vinyl line will surprise you for its natural fusion look and will inspire you in designing high profile modern interior-exterior furniture.

Reliance

This highly successful line of simil-terry cloth is a winning alternative to cotton terry cloth. Made out of polyester in a water-repellent finish, provides performances of a real upholstery material. Resistant to abrasion, is a micro-stitched textile, treated with an anti-stain finish. It has a good color stability and is dyed in many very modern design colors. It is priced very competitively if compared to terry-cloth and can be used either as a cushion cover or as a upholstery material on its own.

textiles

Yankee e Ranger

The most extraordinary genuine leather substitute developed by FMG will be soon available in a new exciting and modern color range. Finally available in many FR standards, specific for every sector of application, it has been re-designed to be more in line with the current market needs and trends. As a result of this major R&D project the price has been reduced considerably. It is now more affordable and applicable also on smaller yachts.

Ios

Probably the most important break through at FMG. This textile is really extraordinary. Used as a cover product for any application, strikes for its mechanical resistance in change of very few grams of weight, for just 150 grams/sqm. is a fantastic alternative to ugly PVC coated textiles. Anti-mildew, anti-abrasion, basically waterproof also in the stitching. UV stable, provides high grade UPF protection. An infinite number of applications are possible with this product for a very honest price!

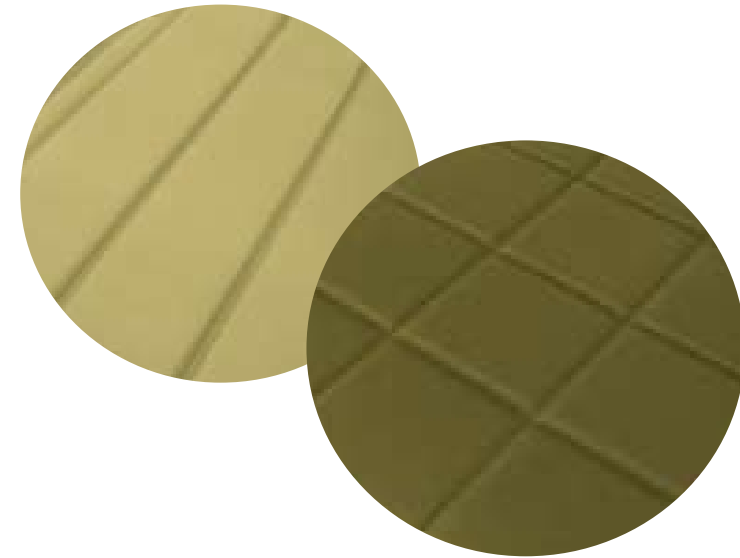

textiles

Special heat-forming service

The majority of our upholstery products can be heat formed to create special effects and patterns.

Please ask our sales support for further information.

Slitting service

We can heat-slit textiles to any width. To achieve a better utilization of textiles, we can slit for a very small charge probably any type of textile to a specific width.

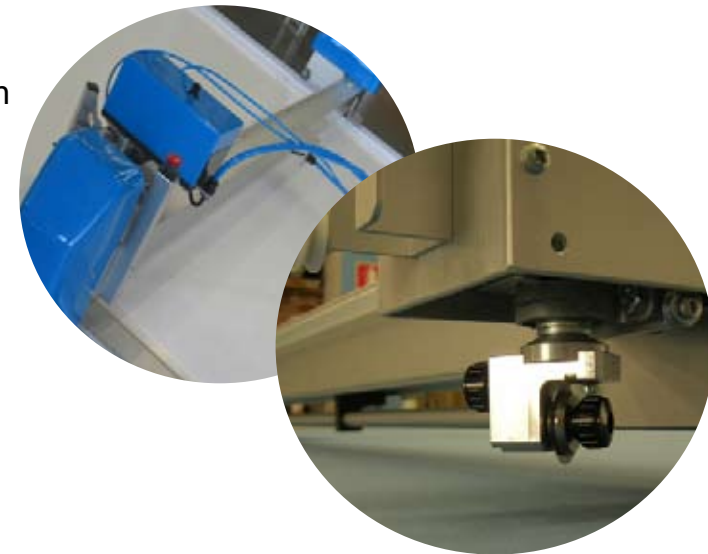

textiles

Cutters and plotters

The number of installations with Covermakers and Upholsterers keep on increasing even in this period of crisis. We can prove that our machine can seriously improve your economies. Our machine remains un-beaten in terms of cost-performance ratio. The simplest and most reliable machine on the world market!

Our sales/customer service dept. will contact you within short time to fix an appointment in order to show you better our collection.
